DIGITAL VIDEO
CAMCORDER

The Essence of Professionalism

www.canondv.com

The Full Potential of Digital Video In One Extraordinary Camcorder

Canon pursued imaging greatness resulting in the ultimate digital camcorder system, the XL1S. It starts with a highly intelligent "open architecture" design, which allows you to customize your XL1S with the widest variety of optional accessories available. Plus you have extensive control over picture and sound adjustments to tailor the "look and feel" of each recording to your preference or even your clients'. Whether you define yourself as an imaging enthusiast, professional videographer or digital filmmaker there is a Canon XL1S digital camcorder configuration that's just right. Which one is right for you?

IEEE1394 DV Terminal

The XL1S is equipped with a DV IN/OUT terminal that conforms to IEEE1394. It takes just a single digital cable to transfer or copy your videos in pure digital form to your DV compatible computer or another Canon DV camcorder. Once you've transferred video images to your computer, you can edit your movies, stream them over the Internet, or post them on your Web site. Also, you can print them out on a Canon color printer, transfer them back to your Canon camcorder and archive them on a Mini DV cassette, or create a dubbing master.

canon connects
plug and edit

learn more at www.icanstream.tv

DV format

Whether your need is broadcast production or simply the very best picture quality, the Mini DV format delivers more than 500 lines of horizontal resolution – nearly a 25% improvement in picture quality over the best analog formats. The tape formulation is advanced to last longer and even withstand repeated use without failure, virtually eliminating drop out, delivering higher output and less noise.

Mini DV Digital Video Cassette

accurate color reproduction suitable for the demands of the high-end production field – wide dynamic range, low color noise, natural color resolution and low aliasing.

Pixel Shift

Canon solves common shooting dilemmas by using a signal processing technique called Pixel Shift, which has been used in professional grade video cameras for many years. It achieves wider dynamic range, brighter video in low light, reduced vertical smearing and sharper digital photos.

PIXEL SHIFT

Super Low Light

The XL1S incorporates three CCD image sensors specifically designed for freedom when shooting under extremely low light conditions. The size of each pixel is 72 square microns. That's 150% larger than the pixel-size on comparable models. The result is an overall 4dB (approx.) improvement in sensitivity.

Achieve Super High Resolution Alongside Super Low Light Capability

3CCD

The XL1S maximizes the capability of the DV format by using a 3 CCD system assigning a separate CCD to each primary color (red, green, blue). A beam-splitting prism precisely separates the light passing through the lens into individual color components, and each is sent to its own CCD. This process achieves outstanding detail with highly

3CCD
Super Low Light

The choice is Yours...

Interchangeable Lens System

A super-flexible system with an unbeatable range. The XL1S maximizes your options via the XL mount system for a focal range from 24 to 2160mm. This unbeatable range is made possible through the use of Canon's XL and EF 35mm camera lenses.

3X Extra Wide-Angle Zoom Lens

The 3X zoom lens provides the world's widest field-of-view on any DV camcorder. The focal length is 3.4mm to 10.2mm (35mm equivalent 24mm to 72mm) and the resolution exceeds 600TV lines.

Optical Image Stabilized 16X Zoom Lens IS II

It resolves over 600 TV lines to deliver an extraordinarily sharp image. By exceeding the DV standard of 500 TV lines, this lens provides greater visual "sharpness" through the critical 100 to 250 TV line resolution area. It also includes Canon's "SuperRange" Variable Angle Prism for enhanced optical image stabilization plus a ND filter, manual focus and zoom rings and a Push AF button.

Manual 16X Zoom Lens

Perfect for the video application that requires precise manual lens control, this lens provides focus, zoom and aperture scales. Even more it includes a powered zoom, automatic iris and 2 built-in ND filters.

3D Imaging Video Lens

Now it's possible to create stereoscopic video with the XL1S simply by changing the lens.

It incorporates a 3X zoom feature and convergence features can be fully automatic or manually controlled for realistic depth and presence.

1.6X Extender

Attach this extender between the XL1S camera and the Optical Image Stabilized 16X Zoom Lens or the Manual 16x Zoom Lens to increase the focal length magnification by 1.6x.

SuperRange Optical Image Stabilizer

Until now, optical image stabilizers have used solely a gyro sensor to detect camcorder vibration (the data from which controls a vari-angle prism that continuously corrects the path of the incoming light). SuperRange goes one step further by examining the image *after* it is received by the CCD, and detecting any low-frequency vibrations missed by the gyro. This data is fed-back to accelerate and refine the movement of the vari-angle prism. This greatly improves performance for low frequency vibration, resulting in the most advanced optical image stabilization available today. This feature is found only on Canon's optical Image Stabilized 16X zoom lens.

Image stabilizer ON

Image stabilizer OFF

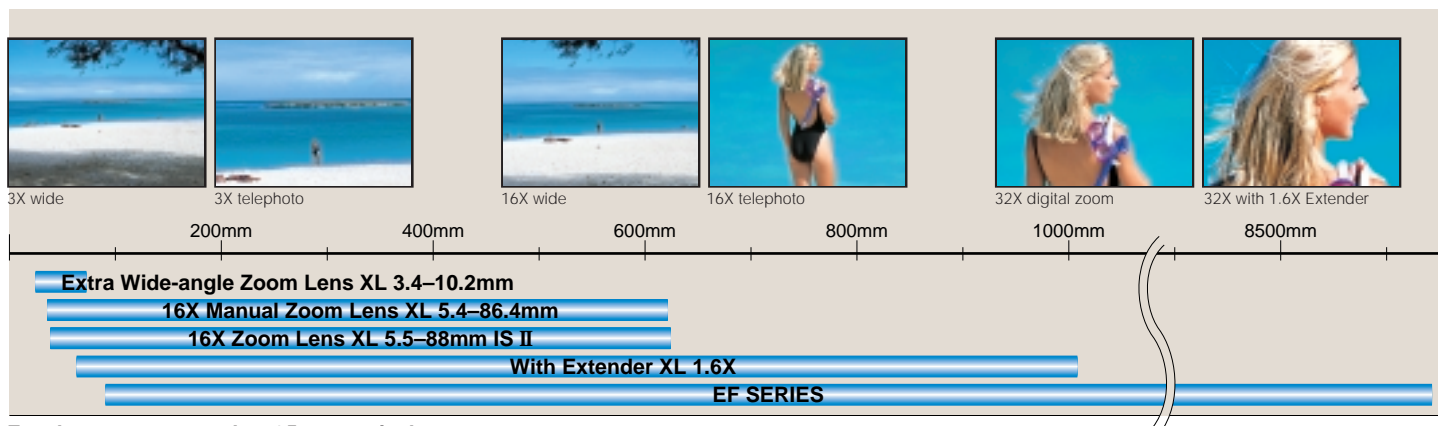

EF Adapter

The EF adapter allows you to attach Canon EOS 35mm camera lenses to the XL1S. This is especially helpful for telescopic imaging such as sports, wildlife, surveillance and astronomy because the image magnification of any 35mm lens is increased 7.2X when mounted onto the XL1S.

1200mm EF lens

Focal range expressed as 35mm equivalents

Professional Performance In Each and Every Feature

3 Shooting Modes

The XL1S has three shooting modes to accommodate any of your recording needs.

Normal Movie Mode

By merging Canon's superior lens quality with 3 CCDs, the XL1S delivers stunning resolution and color reproduction - some of the best images outside of a TV studio. This mode records video in the standard interlaced fashion similar to conventional camcorders. Normal Movie Mode is ideal for recording video which appears smooth and natural during playback on a TV or video editing computer.

Digital Photo Mode with self timer

Take almost 700 brilliantly clear still pictures on a single tape (in SP mode). The photo mode further distinguishes the XL1S by capturing extremely high resolution still images. The camera records the still pictures for approximately 6 seconds, as well as recording the sound for your verbal notes or narration. You can search through the recorded tape for your photos using the supplied remote control.

Frame Movie Mode

This mode captures video in a unique non-interlaced method allowing the XL1S to record 30 frames of video per second. Similar to a motor drive on a 35mm camera, Frame Movie Mode performs like a Digital Motor Drive. You'll capture every gesture and expression of your subject with spectacular clarity. It's perfect for users who choose to grab high quality still images from video for making prints, video for website content, or even sending emotionally charged images over the internet. The non-interlaced method popularized by Canon's XL1S has even been acknowledged by users for its cinematic-like appearance.

16:9 Aspect Ratio

The XL1S is equipped with two 16:9 aspect ratio methods.

16:9 Guides

The 16:9 guides are thin white lines, which appear in the viewfinder only. They let you view a 16:9 wide screen composition while in the standard 4:3 aspect ratio, which is especially helpful if you're planning to transfer your DV footage to film.

16:9 Recording Mode

The XL1S includes a 16:9 recording mode, which applies an electronic anamorphic stretch allowing you to fill the frame of a 16:9 wide screen TV.

Programmed AE

Puts advanced recording techniques at your fingertips to ensure great results in various shooting conditions. There are six programs in all, giving you the balanced control that you have come to expect from Canon.

Full Auto

Also called the "Green Zone" and identified by the green rectangle on the Command Dial, this is the ideal selection for general shooting.

Auto mode

Similar to Full Auto, Auto handles all camera settings automatically, but also allows the user to select manual functions

Shutter-priority/Aperture-priority (Tv/Av)

The Tv and Av modes permit easy operation while retaining the creative image controls commonly found on Canon's 35mm SLR cameras. In the Tv mode, you select the shutter speed from 1/60 to 1/15000 of a second and the XL1S will automatically set a matching aperture. In the Av mode, you select the aperture from f/1.6 to f/16 and the XL1S automatically sets a matching shutter speed.

Tv Mode

Av Mode

Slow Shutter

Whether your aim is a "streaming" background when panning, or brighter recording in low light, you can choose from three slow shutter settings -1/30, 1/15 and 1/8 of a second.

Picture Adjustment

Up to three picture adjustment settings can be stored, allowing you quick, creative control.

Color Gain

Adjust the saturation of the color between off to oversaturated. This adjustment allows you to shoot in black and white.

[Red]

[Green]

Color Phase

Adjust the Color Phase toward red or green for exact control.

Camera Sharpness

Adjust the range of picture sharpness to your preference before recording. Softer may compliment the subject while sharper will make details more visible.

Soft

Sharp

Setup Level

Adjust the black level of the video signal for the best shadow detail.

Clear Scan

The XL1S can be adjusted to match the frequency of a CRT monitor, allowing you to record the monitor without rolling black bars.

SMPTE Color Bars

The XL1S generates SMPTE color bars for accurate matching to your monitor or edit suite.

White Balance

White Balance can be set for Automatic, preset Indoors, preset Outdoors and 3 Set memories, for any lighting condition.

AE Shift

By adjusting the AE Shift Control you can lighten or darken the image to precisely control the exposure level of the Program AE modes.

Digital Effects

The XL1S is equipped with a 2X Digital Zoom to electronically increase the magnification of the image plus a Fade Trigger feature, which applies a black fade to the beginning or end of a scene.

Gain Control

As well as automatic gain, the XL1S has settings for -3dB, 0dB, +6dB, +12dB, +18dB, and +30dB for creative control in any shooting condition.

Zebra Pattern

Reveal areas of overexposure, using these diagonal stripes to guide you when setting the aperture and shutter speed. Select from five levels: 80, 85, 90, 95, and 100 %.

Interval Timer

With the interval timer, you can record for a selected time with selected interval. This function is convenient for nature observation such as flowers, sunsets, etc. You can select the interval time from 30 sec, 1 min, 5 min and 10 min, and the recording time from 0.5 sec, 1 sec, 1.5 sec and 2 sec.

VCR Stop

You can turn the recorder section off leaving the camera section turned on, so you can adjust the camera section without worrying about the Automatic shut-off (5-minute timer).

(focus, exposure, white balance, for example).

Manual Mode

If you want to make all the decisions, this is the mode to use. You can choose any combination of shutter speeds and lens apertures.

Spotlight

Designed to be used when subjects are illuminated by intense light sources, such as under spotlights on a dark stage. This mode is designed to prevent the subject from being grossly over-exposed, against a dark background.

Custom Keys

You can assign frequently used functions to the keys (camera mode and VCR mode independently) to customize the camera to your shooting preferences or environment. You can assign the following functions to the Custom Keys.

Camera mode

- Index Write • Zebra pattern • VCR stop • TV screen
- Audio 1 in • Audio 2 in • Zoom grip speed
- Zoom handle speed • No function assigned

VCR mode

- TV screen • Data code • Audio 1 in • Audio 2 in
- No function assigned

Four Channel Digital Audio

The XL1S records digital stereo sound. You can record 16 bit audio (2 channels, 48KHz) or 12 bit audio (4 channels, 32KHz). Audio level can be fully automatic or manually controlled and monitored by an illuminated VU meter. The XL1S also accepts Line or Mic level audio sources to ensure an accurate impedance match.

PCM STEREO Microphone

The XL1S comes complete with a high quality microphone, that gives excellent performance.

Headphone Terminal

You can monitor the level and quality of the audio you are recording, to ensure the best quality.

Composite/S-Video Input and Output

The XL1S can be connected to any monitor by a composite (RCA) cable or by an S-Video cable. The same video terminals also accept video signals for recording from external sources such as a TV, VCR or another camcorder. The MA-200 adaptor has a BNC connector for connection to professional equipment.

XLR Audio Inputs

The optional MA-200 Microphone Adaptor/Shoulder Pad is equipped with 4 XLR connectors for use with professional audio equipment and a BNC video connector. This unit also allows you to attach an optional commercially available wireless microphone receiver plus it functions as a shoulder pad for advanced handling and control.

AV Insert and Audio Dubbing

Add a new scene into your video from another source such as a camcorder or VCR. (Your video must be recorded in SP mode.) You can also add a new stereo audio track onto your video such as a voice over or background music. (Your audio must be recorded in the 12 bit mode.)

DV Control

You can control the record and pause of equipment that conforms to the AV/C protocol connected to the XL1S using the DV terminal. For example, record to miniDV tape and an optional FireWire Controller and Hard Drive system simultaneously.

Time Code

This precisely identifies each recording down to the individual frame, showing the hour, minute, second and frame in the display. The XL1S uses a "drop-frame" system that is frame accurate.

Data Code

Data code, which is recorded separately from the video signal, lets you display or hide data such as date, time, exposure etc. as required. This data can also be permanently "burned in" over the video for verification or surveillance purposes.

Index Recording

You can mark "the best take" when you are shooting, for easy access when playing back in the VCR mode.

Ergonomics and Magnesium Body

The XL1S camcorder is designed to support extensive field use. Its chassis is mounted on a single, durable magnesium alloy frame to provide overall strength and protection from external shock – blending twenty times the durability of ordinary camcorder bodies, with countless times the style. The layout and design of the controls and functions makes the XL1S ergonomically and practically a joy to use.

Top Grip With Recording Controls

In addition to the normal side grip, the XL1S features a carrying handle complete with a duplicate set of recording and zoom controls to better meet your individual recording style, as well as being ideal for low-angle recording.

Photo Search/ Date Search/Index Search

The wireless controller included with the XL1S allows you to quickly locate still photos on a recorded cassette. Video can be searched based on the date recorded or by the index mark.

Zoom Speeds

The XL1S is outfitted with 4 zoom speed options: Variable (pressure controlled) or Low, Medium and Fast. These apply to the zoom rockers on the handgrip and the top grip (3 zoom speeds).

SLR-Style Flash Photography

Attach a Canon Speedlite E-TTL flash (420EX or 550EX) using the optional FA-200 Flash Adapter to use the XL1S for flash photography, just like you would with an SLR camera. The camera sets the flash duration, sending out a pre-exposure flash to ensure correct exposure before the main flash is sent out.

ZR-1000 Remote Control

This optional wired remote control connects to the LANC terminal to operate the zoom speed, focus, recording, data display and other features, and attaches to most tripod handles.

Remote Control

The XL1S kit includes a full function wireless remote control to manage features during recording and playback hands free.

CH-910 Dual Battery Charger/Holder

Holds two battery packs. Charges them consecutively and connects directly to the MA-200 adapter for longer recording time and better balance.

LANC

The LANC terminal permits easy connection of compatible controllers or the Canon ZR-1000 Remote Control.

Canon XL1S Specifications

Power supply (rated): 7.2 V DC
Power consumption (While recording, AF=ON): 8.7 W (Approx., recording with the AF turned on)
Television system: EIA standard (525 lines, 60 fields) NTSC color signal
Video recording system: 2 rotary heads, helical scanning system DV system (Consumer digital VCR SD system) Digital component recording
Audio recording system: PCM digital sound; 16 bit (48kHz/2ch), 12 bit (32kHz/2 from 4 ch), 12 bit (32kHz/4ch simultaneous)
Image sensor: 3CCD 1/3" Pixel Shift (charge coupled device) 270,000 pixels (250,000 effective pixels)
Tape format: Videocassettes bearing the (i) mark.
Tape speed: SP: 3/4 ips (18.81 mm/s); LP: 1/2 ips (12.56 mm/s)
Maximum recording time: SP: 80 minutes (with a 80 min. cassette); LP: 120 minutes (with a 80 min. cassette)

Fast forward/rewind time: 2 mins 20 sec. (with a 60 min. cassette)
Lens mount: XL Interchangeable lens system
Focusing system: TTL autofocus, manual focusing possible.
Maximum shutter speed: 1/15,000 sec
Minimum illumination: 2 lx (using XL 5.5-88mm lens and slow shutter at 1/8 of a second)
Recommended illumination: More than 100 lx
Filter diameter: 72mm (XL lens)
Viewfinder: 0.7-inch, color LCD (approx. 180,000 pixels)
Microphone: Stereo electret condenser microphone
DV terminal: Special 4 pin connector (based on IEEE1394)
Output level:
Video terminal: RCA jack, 1 Vp-p/75Ω unbalanced, synchronized load
S-video terminal: 4 pin mini DIN, 1 Vp-

p (Y signal), 0.286 Vp-p (C signal)
Audio terminal: RCA jack (L, R), 2 sets 4dBm (47kΩ load)/3kΩ or less, unbalanced
Input level:
Audio terminal: RCA jack (L, R), 2 sets
 -11dBV/47kΩ (LINE), unbalanced
 -35dBV/600Ω (MIC ATT), unbalanced
 -55dBV/600Ω (MIC), unbalanced
Microphone terminal: ø 3.5mm stereo mini-jack, -59dBV (with 600Ω mic)/600Ω
Operating temperature range: 32° - 104° F (0° - 40° C)
Dimensions: 8 3/4 x 8 7/16 x 16 5/16 in (223 x 214 x 415 mm)
Weight (not including lens and battery pack): 3 lbs 11 15/16 oz approx. (1.7kg)
(fully loaded): 6 lbs 4 7/8 oz approx. (2.86kg)

FS-72U Filter Set

Includes neutral density (ND 8), polarizing and ultraviolet filters.

Extender XL 1.6X*

Fits between the XL1S and an XL lens to boost the power of the lens by 1.6X.

XL3.4-10.2mm 3X Wide-Angle Lens

This extra wide-angle 3X zoom lens provides 24-72mm 35mm equivalent focal length with high resolution exceeding 600 TV lines. It has an ND filter, manual focus and zoom ring.

XL5.5-88mm 16X Image Stabilized Lens IS II

Optical image stabilized zoom lens has an ND filter, manual focus and zoom ring providing you with great flexibility for versatile shooting conditions.

XL5.4-86.4mm 16X Manual Zoom Lens

This manual lens gives you the flexibility of calibrated power zoom, power iris, 2 built-in ND filters and calibrated manual focus.

XL7.5-22.5mm 3D Imaging Video Lens

This stereoscopic lens has power or manual zoom, auto or manual focus, and manual convergence control with auto capability.

EF Adapter XL

Allows the attachment and compatibility of Canon EF photographic lenses.

EF Lenses

The selection of EF lenses you can attach to the XL1S is the largest in the world. Since the focal length is multiplied by 7.2X with the EF lens, you can get the incredible long range and high picture quality.

HC-3100 System Case

A solid and lockable system case that provides stylish protection during transportation and storage.

FU-1000 Monochrome CRT Viewfinder Unit

This professional style 1.5 inch monochrome CRT for use in critical shooting situations.

ZR-1000 Zoom Remote Controller

Plugs into the camcorder's LANC terminal and allows you to control functions such as record start/stop, zoom and focus while the camcorder is mounted on a tripod, without touching the camcorder body itself.

420EX/550EX Speedlite Flash

Attaches to the XL1S to give SLR-style flash photography. (The optional FA-200 Flash adapter is also necessary.)

VL-10Li Battery Video Light

Powerful 10 W illumination. A lithium ion battery attaches directly, so operation is cable-free.

FA-200 Flash Adapter

Enables you to use a Speedlite flash with the XL1S.

MA-100 MA-200 Microphone Adapter/Shoulder Pad

The MA-100 allows attachment of 2 audio inputs with XLR connections. The MA-200 allows attachment of 4 audio inputs with XLR connections and the addition of a BNC video connector.

CB-910 Car Battery Adapter

To charge lithium ion batteries or power the camera from a car cigarette lighter socket.

CH-910 Dual Battery Charger/Holder

Holds two battery packs. Can charge them consecutively and connect directly to XL1S to give twice the playback time.

Lithium Ion Battery Packs

Maximum continuous recording time:
BP-915: 50 minutes
BP-930: 105 minutes
BP-945: 135 minutes
